

DEPOPPER

Last updated: December 2007

DePopper, version 2.16, \$18 to register. The unregistered version is fully functional for 30 days so you can evaluate it.

<http://www.droidinfo.com/software/depopper>

The download file name is DePopSfx.exe, file size is 1.34 MB.

I ran DePopper on *sdemo1.wav* with both the Remove Large Clicks and Remove Small Clicks boxes checked and it removed most of the clicks and pops. Then I checked the Remove Hiss box too (using the program defaults) and made a second pass – the file cleaned up very nicely. DePopper is non-destructive as it does not change your original file. It makes a new file and adds `_NEW` to the original file name. Good results from an \$18 program.

As of December (2007) this program is still available for an \$18 registration fee. The current version is 2.20. I've downloaded the new version but I haven't determined yet if the registration transfers.
