This product description is a quote from the Tracertek website:

“Integrity is designed to quickly scan your audio files...whether they are still on your hard disk or have been copied to a CD. Integrity will find dropouts, report them and even launch the problem WAV files in your favorite audio editor.”

You can also download a trial version to try before you buy – about 1 MB.

I bought a copy and it's very useful – but it's so fast you won't believe it's really working! That is, until you find a file with dropouts.
