

## NOISE WIZARD

Last Updated: December 2007 (**NOTE Reduced price!**)

**Noise Wizard**, version 1.1, \$119 to register. *Noise Wizard* consists of five Direct-X plug-ins which can be installed in *Adobe Audition* (or one of the *Cool Edits*), *Dart XP Pro*, *DC Six*, *DC Seven*, *Sound Forge*, *WaveLab* or any other audio program accepting Direct-X plug-ins. The five plug-ins are DeClicker, Denoiser, Filter Toolbox, Stereo Processor and Band Extrapolation. You can register *Noise Wizard* or any of the plug-ins separately.

<http://www.virtos-audio.com>

The download file name is noisewizard11.exe, file size is 642 kB.

I used Noise Wizard in Dart XP Pro to evaluate it in cleaning up sdemo1. DeClicker, using the default presets, gave very good results. (The demo version puts a beep in the result file every 5 seconds.) Filter Toolbox using the default presets didn't do nearly as good a job. I think Noise Wizard would be a good addition to my restoration tools but I probably won't buy it since I have other software that does as well.

In December 2007 I went to the *Noise Wizard* website to check version number and price. I found the version number unchanged but the price had been reduced to \$59.50 so I licensed a copy. For this price (50% off), it's worth having in my "tool box".
