

SOUND SOAP

Last Updated: December 2007

Sound Soap, version 2.11, \$129 to register directly from the manufacturer. You can find a “street price” of about \$100. by doing a *Google* search on *SoundSoap*. There is no demo version available but you can download the User Guide – it is quite comprehensive. *Sound Soap* can be used as a “stand alone” program or as a Direct-X plug-in.

I have upgraded one computer to Windows XP® and *Sound Soap 2.11* has been installed. You can expect a review in the near future. (The upgrade from version 2.0 to 2.11 was free but I did have to enter my 2.0 serial number and get a new serial number by email.)

Sound Soap Pro, version 1.2, \$599 to register directly from the manufacturer. You can find a “street price” of about \$500 by doing a *Google* search. A trial version is available for download as is the User Guide as an *Adobe Acrobat* pdf file. It’s 76 pages and very complete with “how to do it” examples. The *Pro* version is a *Direct-X*, *VST*, *RAST*, *Audio Units* or *Audio Suite* plug-in for Mac® or Windows®.

<http://www.bias-inc.com>

The trial version is a bit large, about 33 MB, so a high-speed internet connection is useful. However, it can be downloaded in less than 2 hours with a dial-up connection.

Click [here](#) to download this page as an *Adobe* pdf file.
